

KEYDRILL PROGRAMMING BOX (KPB)

Overview:

The KeyDrill Programming Box (KPB) enables direct communication between Mud Pulse MWD Tools and a laptop computer without need of a MWD receiver system. It is small and lightweight for easy transport in the shop or field, making it a popular tool among MWD Technicians and Operators alike. When using a Rig Floor Decoder such as the KeyDrill KDU, remote configuration can be performed without moving the KDU to the shack.

Features:

- Facilitates MWD Mud Pulse tool testing, roll testing, memory access & downloads, programming, and configuration directly from a laptop computer.
- Completely compatible with the majority of brand name MWD tools presently used in the field.
- “Plug and Play” simplifies operation and the training process.
- Small, lightweight and portable.

Specifications:

Operation Power: 90-240VAC, 50-60Hz

Operation Temperature: -20° to 60°C

Dimensions: 8"x4-3/4"x3-1/2", Net Weight: 2 lbs.
